Defensive Driving Training Abu Dhabi

Service Objectives

- Prevent collisions and reduce operational disruption on Abu Dhabi routes.
- Anticipate, recognise, and neutralise hazards across urban, highway, and desert conditions (E11, ICAD/Mussafah, KIZAD/Khalifa Port, Ruwais corridors).
- Strengthen hazard perception and scanning; improve speed, spacing, and lane discipline in multi-lane highways and roundabouts.
- Manage fatigue, heat stress, and night driving through pre-shift checks, hydration planning, and rest protocols adapted to Abu Dhabi's climate.
- Integrate OSHAD/client requirements into daily routines, vehicle inspections, incident reporting, and Journey Management controls.
- Execute defensive manoeuvres (controlled braking, evasive steering, skid awareness) with emphasis on load stability for HGVs and buses.

> Measurable outcomes reported: fewer collisions and near-misses, stronger compliance evidence (OSHAD/ISO 45001), improved journey efficiency, and enhanced client/insurer confidence.

Who This Service Is For

- Organisations operating vehicles in Abu Dhabi: oil and gas contractors, EPC firms, logistics providers, utilities, municipal services, and construction/maintenance teams.
- Operations covering Mussafah/ICAD industrial corridors, Abu Dhabi City during peak hours, KIZAD/Khalifa Port, and long-haul journeys to Ruwais.
- Fleets including light vehicles, pickups, HGVs, and crew buses; single or mixed fleet profiles.
- Companies working under ADNOC frameworks, Tier-1/2 logistics subcontractors, and facilities with large in-house transport fleets.
- Multinational driver populations requiring delivery in English, Arabic, and South Asian languages.
- Risk profiles featuring mixed-ability road users, heavy-lift convoys, sand and variable lighting, extreme heat, fatigue, and frequent urban-highway transitions.

Duration & Process Overview

- Fundamentals: 1 day (6–8 hours) — classroom plus on-road coaching; suitable for mixed fleets in Abu Dhabi City/Mussafah.
- Advanced (with route coaching): 2 days — scenario-based with extended on-road for high-risk journeys (Ruwais, KIZAD/Khalifa Port) and HGV/bus operations.
- Refresher: 0.5 day (4 hours) — targeted workshop plus corrective coaching for renewal and post-incident actions.

- Blended: 2–3 hours eLearning + 3–4 hours on-road — effective for distributed, multi-shift teams across Abu Dhabi sites.

Scheduling can align to shift handovers, weekends, or night operations. Practical sessions use client-approved vehicles and pre-agreed, operation-relevant routes.

Methodology

Phase	Objective	Deliverable
Pre-training needs analysis	Review incident trends, routes, vehicle classes, and client rules to localise content to Abu Dhabi operations.	Concise training plan aligned to risks and agreed coaching routes.
Classroom foundations	Cover OSHAD elements/client expectations; human factors (heat, fatigue); vehicle readiness and inspections.	Module pack and checklists aligned with ISO 45001 and fleet rules.
On-road route coaching	Apply scanning, spacing, lane discipline, and defensive manoeuvres on real routes (yard-to-port, city shuttles, highway legs).	Observed coaching notes and route-based feedback for each delegate.
Scenario drills	Industrial access, convoy etiquette, sand gust response, roundabouts, reversing and load stability (as applicable).	Performance observations and improvement actions.
Assessment and feedback	Verify knowledge and behaviours via MCQ/scenario questions and observed on-road evaluation.	Assessed rubric with immediate coaching feedback.
Documentation and certification	Evidence competence and compliance for audits and client prequalification.	NPM Certificate of Completion (course title, hours, assessment, validity guidance).
Post-training reinforcement	Equip supervisors to coach and embed Journey Management principles in daily operations.	Supervisor coaching tips and follow-up action points.

Phase 1 — Pre-training needs analysis

Short review of incidents, routes, and fleet rules to tailor scenarios and coaching routes to Abu Dhabi conditions.

Phase 2 — Classroom foundations

OSHAD/client requirements, human factors (heat/fatigue), and vehicle readiness fundamentals.

Phase 3 — On-road route coaching

Coaching on agreed routes to apply defensive techniques where drivers actually operate.

Phase 4 — Assessment and feedback

Knowledge check and observed driving evaluation with immediate, constructive feedback.

Phase 5 — Certification and follow-up

Issuance of NPM certificates and supervisor guidance to reinforce behaviours post-training.
