Fire Warden Training Abu Dhabi

Service Objectives

Practical, site-specific competence for wardens and marshals in Abu Dhabi, aligned with OSHAD-SF and Abu Dhabi Civil Defence expectations.

- Perform statutory and practical warden duties in line with local code and ERP requirements.
- Understand fire strategy and protection features; recognise alarm types, evacuation phases, protected routes, refuges, and assembly points.
- Coordinate with control rooms, security, and floor wardens to manage sweeps, roll calls, and accountability logs.
- Undertake safe initial fire response for incipient fires, including correct selection and use of portable extinguishers.
- Translate theory into action through realistic drills and simulations tailored to facility risks and layouts.
- Document lessons learned and corrective actions, feeding back into the ERP and training plan.

> Focused on Abu Dhabi realities: phased evacuation in high-rises, large warehouses with high-rack storage, process areas with flammables, and multi-tenant coordination.

Who This Service Is For

Designed for organisations operating across Abu Dhabi with responsibilities for emergency coordination and evacuation leadership.

- Industrial zones and logistics hubs (Mussafah, ICAD, KIZAD) and sites near Khalifa Port.
- High-rise commercial and mixed-use facilities on Al Maryah Island and similar districts.
- Oil and gas-linked facilities, large warehouses with high-rack storage, construction sites, and complex campuses with contractors.
- HSE and facilities managers, operations supervisors, security contractors, tenant representatives, reception/FM teams.
- Sites undergoing fit-outs, expansions, or occupancy/load changes impacting routes, protected stairwells, or fire system impairments.
- Multi-tenant buildings and business parks seeking unified procedures, radio channels, and accountable roll calls.

Duration & Process Overview

- Standard delivery: 1-day on-site (6–7 hours) combining classroom instruction with a supervised evacuation drill or table-top exercise.
- Blended option: live virtual pre-workshop for theory, followed by on-site practical and a building-specific drill.

- Large or multi-hall sites: staggered or concurrent sessions to maintain operations while ensuring coverage.
- Cohort size: typically 10–16 participants for hands-on practice and quality debriefs; pre-delivery needs analysis using floor plans/ERPs and, where feasible, a site walk.

> Measurable outcomes reported by clients include faster evacuation times, clearer accountability, and improved compliance evidence for OSHAD and landlord/FM audits.

Methodology

Modular, scenario-driven delivery aligned with UAE Fire & Life Safety Code, OSHAD roles, and Abu Dhabi Civil Defence liaison.

Phase	Objective	Key Deliverable
Pre-delivery needs analysis	Gather ERPs, floor plans, shift patterns; tailor to occupancy and risks; align with local liaison protocols.	Site-specific training and drill plan with scenarios.
Codes and fire strategy orientation	Map UAE Fire & Life Safety Code, OSHAD roles, and Civil Defence interface to your site.	Shared understanding of strategy and protection features.
Building familiarisation tour	Review detectors, alarms, sprinklers, standpipes, fire doors, pressurisation, and impairment tags.	On-site familiarisation checklist and priority points.
Warden roles and evacuation tactics	Define pre-incident checks, sweeps, communications, phased vs full evacuation, and assistance needs.	Practised sweep and accountability protocol.
Initial fire response practice	Assess incipient fire risk; select extinguishers (NFPA color coding); apply PASS technique.	Observed safe use of portable extinguishers.
Scenario, drill, and performance observation	Run table-top or live drill; evaluate timing, communication, and coordination with control/security.	Performance scores and key findings.
Debrief, reporting, and action tracking	Conduct after-action review; reconcile roll calls; define corrective actions and ownership.	Post-drill report with action log and timelines.
Assessment and certification	Short knowledge check and observed competence confirmation.	Certificates of Completion issued by NPM.
