ISO 45001 Internal Auditor Training Abu Dhabi

Service Objectives

Designed to build practical, risk-focused internal audit capability for Abu Dhabi operations.

- Translate ISO 45001:2018 clauses into auditable controls and checklists aligned to OSHAD-SF and client HSE requirements.
- Plan risk-based audits that target material risks and critical controls (PTW, confined space, LOTO, lifting, process safety interfaces).
- Gather corroborated evidence through interviews, observation, and document review across multi-lingual workforces.
- Write clear, graded nonconformities and opportunities for improvement with root cause linkage.
- Validate corrective actions and integrate outcomes into KPIs, management review, and continual improvement.

> Delivered by practising auditors using Abu Dhabi-relevant scenarios and documents (permits, toolbox talks, JSAs, inspection and calibration records). Aligns ISO 45001 requirements with OSHAD-SF and Abu Dhabi Civil Defence expectations.

Who This Service Is For

- Organisations in Abu Dhabi requiring demonstrable due diligence to OSHAD-SF, MOHRE, and Abu Dhabi Civil Defence.
- HSE coordinators, HSE engineers, supervisors, and line managers responsible for risk controls, contractor oversight, and HSE reporting.
- Oil and gas and petrochemical operations (Ruwais and connected assets); manufacturers in ICAD and Mussafah.
- Construction and EPC projects across Abu Dhabi city, Al Dhafra, and industrial zones seeking consistent evidence for certification bodies.
- Logistics and warehousing near Khalifa Port and KIZAD focusing on traffic management, ergonomics, and contractor safety.
- Delivered on-site in Mussafah, ICAD, KIZAD, Ruwais, and across Abu Dhabi city.

Duration & Process Overview

- Standard delivery: two days (16 hours) for core competence; optional third day for sector-specific deep dives (construction, oil and gas, manufacturing).
- Format: short lectures, coached role-plays, document analysis, and live walk-through audits where site access is possible.

- Hybrid option for distributed teams: pre-work eLearning plus one intensive on-site day; adapted to shifts, turnarounds, and permit windows.
- Post-training: optional supervised mini-audit with individual feedback; continuous assessment and final written test; recommended group size 8–14; NPM Certificate of Completion.

Methodology

Modules progress from clause interpretation to live practice using Abu Dhabi-based scenarios (refineries, construction sites, fabrication yards, warehousing, marine and utility operations).

Phase	Objective	Deliverable
1. ISO 45001 & Risk-Based Auditing	Map clauses to risk controls and PDCA; embed risk-based thinking.	Clause-to-process audit matrix for a Mussafah workshop.
2. Planning & Sampling Strategy	Build the audit programme and plan; right-size sampling depth and focus.	Audit plan for KIZAD warehousing and traffic control.
3. Conducting the Audit	Execute interviews, observation, and documentation review.	Evidence bundle and interview notes from a multi-lingual fabrication crew role-play.
4. Writing Findings & Grading	Grade NCs, apply cause logic, and link to corrective actions.	Clear, defensible nonconformities from a simulated lifting incident.
5. Follow-Up & Effectiveness	Verify closure effectiveness and feed outputs to management review.	Validated corrective actions on LOTO deviations; inputs for management review and KPIs.

Participants leave with templates and checklists calibrated to Abu Dhabi’s regulatory environment and high-risk tasks, enabling immediate deployment within internal audit programmes.
